FOR IMMEDIATE RELEASE

ALAB, LLC GRANTED UNITED STATES PATENT ON QuickPure™ ORAL IRRIGATOR TECHNOLOGY

Rush, NY, July 26, 2007. The United States Patent Office has granted Alab, LLC Patent No. 7,244,354 titled Ozone Irrigator, which is enforceable for 20 years following the filing date.

The United Kingdom has granted a corresponding patent no.GB 2,389,312 and Canada has granted corresponding patent No. 2433707 for Alab's oral irrigator invention. Other foreign patents are pending. Alab now has 45 US and foreign patents protecting its QuickPure™ technology for small ozone appliances.

The QuickPure™ Oral Care Appliance cleans the mouth and teeth by irrigation with water containing dissolved ozone. Ozone, which is a potent germ-killer and oxidizer can reduce or eliminate gingivitis, periodontitis, gum bleeding, bad breath, teeth stains, thrush and harmful oral bacteria. As well as cleaning teeth and refreshing the mouth, this inexpensive and easy to use small appliance could save users unpleasant and costly dental treatments and make them more attractive with sweeter breath. Reducing oral bacteria may help prevent some serious diseases such as diabetes and coronary disease, in which oral bacteria have been implicated. This appliance could also substantially reduce or prevent dental tartar and caries, but this has not yet been confirmed. Other potential applications include treatment of sinus, ear, wound and eye infections and surface sanitation.

Advantages of the QuickPure™ ozone irrigator system include:

- Ozone is the only germ-killer that can inactivate all pathogens in a short time. It can destroy biofilms and endotoxins produced by bacteria.
- Ozone stops bleeding.
- Microorganisms do not develop resistance to ozone.
- An ozone sensor can provide assurance of proper operation.
- Ozone does not cause allergic reactions and no problems with accidental ingestion of disinfectant.

About Alab, LLC

Alab is an R & D company focused on inventing and patenting small appliances which use ozone, and on applications for its diffuser technology. It is a private company founded in January 1997 and owned by its president, Dr. W. Alan Burris. ALAB is seeking licensees or joint ventures to do the necessary testing to gain regulatory approval, and to manufacture and distribute products based on its technology. The Alab website is www.quickpure.com.
